

PhD Research Position

The Institute for Geotechnical Engineering and Construction Management is offering a PhD position for 4 years at Hamburg University of Technology, Germany. The research topic is focussed on experimental investigation as well theoretical and numerical modelling with respect to filling of port basins with mud, on creeping of marine soils, and on field measurements of long-term settlements at port areas. The position requires a M.Sc. in civil engineering, if possible with focus on geotechnical engineering. Earnings per month: about 1900 € after tax in the first year. Project begin: 1.9.2012.
